VISHWADHAR KYATHAM

London, United Kingdom | +44 7990 287239 | vishwadharkyatham@gmail.com
LinkedIn: linkedin.com/in/vishwadhar-kyatham-28a475320

Professional Profile

Artificial Intelligence postgraduate with hands-on experience in applied machine learning, natural language processing, and chatbot development. Skilled in designing and building deployable AI solutions using deep learning and transformer-based models, with a focus on performance, explainability, and practical usability. Targeting AI Engineer, Machine Learning Engineer, and Applied AI opportunities in the UK.

Education

MSc Artificial Intelligence
University of East London, UK | 2024–2026
Percentile: 67%
Relevant modules: Machine Learning, Deep Learning, Natural Language Processing, Research Methods, AI Ethics

Bachelor of Technology in Computer Science & Engineering
Narsimha Reddy Engineering College, India | 2018–2022
CGPA: 6.5
Relevant subjects: Data Structures, Algorithms, Databases, Operating Systems, Software Engineering

Technical Skills

- **Programming:** Python
- **Machine Learning:** scikit-learn, supervised learning, unsupervised learning, model evaluation
- **Deep Learning:** TensorFlow, Keras, CNN, LSTM, RNN, Transformers
- **Natural Language Processing:** TF-IDF, Word2Vec, BERT, spaCy, NLTK, tokenisation, embeddings
- **Data Processing:** Pandas, NumPy, data cleaning, feature engineering
- **Tools & Deployment:** Streamlit, Flask (basic), Google Colab, Git, Jupyter Notebook

Project Experience

AI Chatbot Development

- Designed and developed an AI-powered chatbot using Python and NLP techniques.
- Implemented intent classification, contextual response selection, and fallback handling for unseen queries.
- Applied text preprocessing, vectorisation, and similarity-based response ranking.
- Built a modular architecture to support easy extension of intents and responses.
- Deployed the chatbot using Streamlit with attention to usability, responsiveness, and error handling.
- Evaluated chatbot performance using real user queries and iterative refinement.

Fake News Detection Using NLP

- Developed a fake news detection system using 44,000+ news articles from multiple sources.
- Performed data cleaning, preprocessing, and exploratory analysis on large text datasets.
- Extracted features using TF-IDF and Word2Vec embeddings.
- Built CNN and LSTM models for classification, achieving over 99% accuracy with CNN.
- Explored transformer-based models such as BERT for contextual language understanding.
- Used explainability methods including attention visualisation and SHAP to interpret predictions.
- Addressed dataset imbalance and completed full performance evaluation.

Click Fraud Detection for Mobile Applications

- Designed and implemented a client-side machine learning solution to detect click fraud in mobile applications.
- Focused on identifying both in-app fraudulent activity and automated bot-driven attacks.
- Proposed a lightweight and deployable architecture suitable for real-time inference.
- Considered integration with app marketplaces and third-party mobile security systems.

Certifications

- Introduction to Artificial Intelligence — Great Learning
- Natural Language Processing — Great Learning
- Generative AI — LinkedIn Learning
- Mathematical Foundations of Machine Learning — Udemy

Additional Information

- Strong analytical and problem-solving skills
- Comfortable working with research papers and technical documentation
- Experience presenting technical work in academic and project settings
- Eligible to work in the UK (student visa, subject to role requirements)
